LIAM JEONG

Salesforce Technical Architect | Federal & Public Sector · Government Cloud · Agentforce · DevOps

Dallas, TX · US Citizen · (312) 522-0203 · **arch.liam.jeong@gmail.com** · **LinkedIn** · **Trailblazer Profile**

PROFESSIONAL SUMMARY

Salesforce technical leader with **10 years** in the ecosystem and **9 certifications** — including Platform Developer II, Agentforce Specialist, OmniStudio Developer & Consultant, and Copado — and 8+ years designing secure, scalable solutions for federal and state agencies on **Salesforce Government Cloud**. Currently serving the U.S. Department of Veterans Affairs' OMEGA Agentforce Pilot in a **Technical Architect capacity**: leading agent, prompt, and monitoring architecture; authoring observability guidance consumed by System Integrator teams; setting per-metadata-type compliance standards; and enforcing quality through Copado-gated, architect-reviewed releases inside a FedRAMP High boundary. Delivery record spans ten client orgs across federal, state, and commercial programs, pairing deep hands-on engineering (Apex, LWC, OmniStudio, Data Cloud) with architecture governance, design documentation (HLD/TDD), and mentorship of distributed development teams.

CORE TECHNICAL SKILLS

Architecture & Governance: Solution and technical architecture, HLD/TDD authorship, enterprise design patterns, class & sequence modeling, data model and schema design, multi-org and sandbox/environment strategy, architecture governance and design guardrails, architecture & security review processes

AI & Agentforce: Agentforce (topics, custom actions, planner bundles), Einstein Prompt Builder & Flex templates, Data Cloud (DMOs, Agent Analytics), Einstein Trust Layer, LLM credit/cost optimization, Claude on Amazon Bedrock

Clouds & Products: Government Cloud, Sales Cloud, Service Cloud, Experience Cloud, Data Cloud, Revenue Cloud (RCA), Agentforce, OmniStudio

Platform Engineering: Apex (Trigger, Batch, Queueable), Lightning Web Components, SOQL, Flow & Flow Orchestration, Platform Events, OmniStudio (OmniScripts, FlexCards, DataMappers, Integration Procedures), JavaScript (ES6+), SLDS, WCAG / Section 508 accessibility

Integration: REST APIs, middleware and external/legacy system integration, event-driven integration patterns

Security & Compliance: CRUD/FLS enforcement, org-wide defaults & sharing architecture, role-based access control, least-privilege design, FedRAMP High / GovCloud delivery

Quality & Observability: Apex unit testing, Jest (LWC), CodeScan/PMD static analysis, debug logs & Nebula Logger, load and performance validation, governor-limit and platform-limit aware design

DevOps & Delivery: Copado (certified), Gearset, GitHub, CI/CD pipelines, branching & release governance, PR and code-review gates, Agile/Scrum, distributed & offshore team leadership

CERTIFICATIONS

Copado Certification · Jun 2026	**OmniStudio Consultant** · Sep 2024	**Platform App Builder** · May 2020
Platform Developer II · Feb 2026	**OmniStudio Developer** · Mar 2021	**Salesforce Administrator** · May 2020
Agentforce Specialist · Oct 2025	**JavaScript Developer I** · Jul 2020	**Platform Developer I** · Feb 2020

PROFESSIONAL EXPERIENCE

Senior Salesforce Developer · Sprezzatura Management Consulting · Full-time *Mar 2026 – Present*

U.S. Department of Veterans Affairs — OMEGA Project, Agentforce Pilot (Salesforce GovCloud) — *Technical Architect capacity*

- Architected and shipped a conversational **Agentforce Employee Agent** on Salesforce GovCloud — Flow-based agent actions, Flex prompt templates, and planner-bundle topic routing — delivering under the VA's architecture and security review gates inside a FedRAMP High boundary.
- Raised generative-AI output accuracy from **86% to 98%** across six controlled prompt-template iterations by re-architecting qualitative model judgments into deterministic, stepwise text-processing logic.
- Led the project's **Agentforce monitoring & observability workstream**: designed a three-layer application-monitoring architecture (real-time on-platform logging, session-keyed user feedback, scheduled Data Cloud extraction into app-owned objects) and authored the System Integrator (SI) guidance backfilling the pilot High-Level Design's application-monitoring section.
  - Produced a **25-object / 458-field Data Cloud data dictionary** with validated SOQL queries mapping every Agent Analytics KPI to its source DMO.

- Built an Agentforce **credit & usage console** (LWC + Apex, covered by Jest and Apex tests) giving business owners per-module cost visibility under least privilege, re-architecting its trend engine after load tests exposed a hard Data Cloud DMO read ceiling.

- Led the team's **per-metadata-type compwliance standards** (Agentforce, Apex, Flow, Permission Sets) and delivered all work through the Copado DEV → SIT → FULL pipeline under PR and architect-approval gates, leading user-story bundling and a successful release to the Full sandbox.
- Reduced projected LLM credit consumption by tightening agent topic scoping and adding action-level clarification prompts, eliminating unnecessary model invocations.

Senior Salesforce DevOps Engineer · AAA ACE · Contract *Jun 2025 – Nov 2025*

- Re-architected the Mapping API platform using Apex, LWC, and dynamic configuration, improving reliability and reducing integration failures with external systems.
- Implemented a centralized exception framework (Platform Events, Queueable Apex, LWC), enabling automated case creation and faster root-cause analysis.
- Led technical reviews of custom Agentforce solutions and Lightning components, improving real-time job assignment and reducing operational handoffs.

Solution Specialist — Salesforce · Deloitte · Full-time *Jun 2022 – Jun 2025*

Delivered enterprise Salesforce solutions on Government Cloud across six large-scale state, federal, and regulated-healthcare engagements, using OmniStudio, LWC, Apex, Flow Orchestration, and SLDS within Agile delivery teams.

State of Wisconsin — Access Modernization Project (WI AMP) — *LWC Developer / UX Team Lead*

- Led the UX development team building responsive, WCAG-compliant Lightning Web Components with SLDS, modernizing legacy government UIs and improving accessibility, usability, and performance of citizen-facing applications.

State of California — Department of Motor Vehicles (CA DMV) — *OmniStudio Developer*

- Built OmniStudio proof-of-concept components (OmniScripts, FlexCards) on Government Cloud for DMV licensing services; authored Technical Design Documents (TDDs) and led offshore code reviews enforcing scalability, security, and Salesforce best practices.

State of Maryland — Child Care Scholarship Project (MD CCS) — *OmniStudio Developer*

- Modernized the state's child-care scholarship platform with OmniStudio on Government Cloud, streamlining benefit eligibility determination and application intake while significantly improving automation and operational efficiency.

State of Ohio — Medicaid Managed Care Project (OH MMCP) — *Lead Salesforce Developer*

- Served as onshore technical lead on Government Cloud — implemented Flow Orchestration, designed scalable data models and schemas, led the development team, and mentored junior developers.

U.S. Department of Agriculture (USDA) — *Senior Salesforce Developer*

- Sustained project stability on Government Cloud through staffing transitions by implementing Apex security enforcement (CRUD/FLS), role-based access controls, and automated user provisioning via Flows.

BlueCross BlueShield of Tennessee (BCBST) — *Lead Salesforce Developer*

- Provided post-go-live production support and rapid defect resolution within Sales Cloud in a high-compliance healthcare environment.

Salesforce Developer · Revolent / Publicis Sapient · Full-time *2020 – 2022*

State of North Carolina — ReBUILD

- Modernized legacy automation by migrating Workflow Rules and Process Builder to Flow, improving transparency and long-term maintainability for a public sector project.
- Built Batch Apex for high-volume approval and data processing, reducing technical debt while supporting stable, on-time delivery.

Software Engineer / Salesforce Administrator · Direct Trucking · Full-time *2016 – 2019*

- Served as primary Salesforce Administrator, owning org security, automation, and data quality.
- Built internal applications with VB.NET, MSSQL, and JavaScript, reducing manual billing and reporting effort.

EDUCATION

Tech University of Korea *2009 – 2017*

B.S. Computer Engineering — GPA 4.4 / 4.5 · B.S. Game & Multimedia Engineering — GPA 3.8 / 4.5
